

Pharmacogenetic PGx Report

Assay Ordered	Psychiatric Panel
Patient Name	Anonymous
Patient ID#	00000001
DOB	Unknown
Gender	Female
Sample Collection Date	N/A

The Scylex Inc. Pharmacogenetic (PGx) Report is an analysis of the patient's DNA to identify relevant genetic variants to help inform medication efficacy, safety and dosing. Interpretation of the identified gene variants are done by **Scylex Inc.** and are based on the Clinical Pharmacogenetics Implementation Consortium (CPIC)^{*} focusing on immediately actionable clinical recommendations regarding safer and/or more effective medications and dosing for the patient. If applicable, the Medication Report section pairs genetic variant data with the most current FDA-approved drug labels^{**}. This report is meant as an adjunct to your health care provider's recommended treatments. The interpretation of this report should be done in consultation with a qualified healthcare professional. The information provided in this report serves as a valuable tool to support personalized medicine and facilitate informed decision-making regarding medication selection and dosing. Any additional medications listed that have no FDA approved PGx guidance are optional and only provided for educational purposes.

Key Benefits of your Scylex PGx Report:

- **Enhanced medication selection:** The test results will help healthcare professionals identify medications that are more likely to be effective and/or safe for you, based on your genetic profile.
- **Minimized adverse effects:** By considering your genetic variations, healthcare professionals can potentially reduce the risk of adverse drug reactions or unwanted side effects.
- **Optimized dosing:** Pharmacogenetic testing can aid in determining the appropriate dosage of medications, taking into consideration your genetic factors and individual characteristics. Thereby limiting the common trial and error process of finding the right dosage.
- **Improved treatment outcomes:** Personalized medication strategies guided by pharmacogenetic information may enhance the effectiveness of treatment and improve health outcomes.

Sections

- I. Drug Recommendation Summary
- II. Dosing Recommendation Summary
- III. Genotype Summary and Implications
- IV. Disclaimers

Section 1: Drug Recommendation Summary¹

Drug	Pharmacogenetic Test	Genotype	Recommendation
Drug 1	Test 1	Genotype 1	Recommendation 1
Drug 2	Test 2	Genotype 2	Recommendation 2
Drug 3	Test 3	Genotype 3	Recommendation 3

¹ This report is based on the information provided in the patient's medical record and the results of the pharmacogenetic testing. The information is intended to assist in the selection of the most appropriate medication and dose for the patient. It is not intended to be used as a substitute for clinical judgment. The information is provided for informational purposes only and should not be used to make any medical decisions without the guidance of a healthcare provider.

Table 1. Daily Recommendation Summary^a

Age	Sex	Recommendation
1	Male	1.000 L of water per day (approximately 33.8 fl oz)
	Female	0.900 L of water per day (approximately 30.7 fl oz)
2	Male	1.200 L of water per day (approximately 40.7 fl oz)
	Female	1.100 L of water per day (approximately 35.3 fl oz)
3	Male	1.300 L of water per day (approximately 44.1 fl oz)
	Female	1.200 L of water per day (approximately 39.4 fl oz)
4	Male	1.400 L of water per day (approximately 47.6 fl oz)
	Female	1.300 L of water per day (approximately 42.8 fl oz)
5	Male	1.500 L of water per day (approximately 51.0 fl oz)
	Female	1.400 L of water per day (approximately 46.3 fl oz)
6	Male	1.600 L of water per day (approximately 54.5 fl oz)
	Female	1.500 L of water per day (approximately 49.7 fl oz)
7	Male	1.700 L of water per day (approximately 58.0 fl oz)
	Female	1.600 L of water per day (approximately 53.1 fl oz)
8	Male	1.800 L of water per day (approximately 61.4 fl oz)
	Female	1.700 L of water per day (approximately 56.5 fl oz)
9	Male	1.900 L of water per day (approximately 64.9 fl oz)
	Female	1.800 L of water per day (approximately 60.0 fl oz)
10	Male	2.000 L of water per day (approximately 68.4 fl oz)
	Female	1.900 L of water per day (approximately 63.4 fl oz)

1. Introduction

The purpose of this document is to provide a comprehensive overview of the project's objectives, scope, and key findings.

2. Objectives	2.1. Primary Objectives The primary objectives of this project are to identify the key factors influencing the system's performance and to develop a robust framework for its optimization.
2.2. Secondary Objectives	The secondary objectives include the identification of potential risks and the development of mitigation strategies to ensure the project's successful completion.

3. Methodology

The methodology employed in this project involves a combination of qualitative and quantitative research methods. The primary data collection method is through a series of structured interviews with key stakeholders, complemented by a thorough analysis of existing literature and data sources.
